*Lee – please attribute responses to an agency spokesperson:*

What prompted the agency to conduct the tests?

EPA is monitoring groundwater after receiving complaints of private drinking water well contamination.

Was the EPA responding to complaints about high nitrate levels in the water, including a report of one mother who said that she was forced to terminate a pregnancy because of a severe birth defect?

EPA has received numerous complaints from citizens in the area.

When do you expect to have results - and what is the next step of the agency after getting the results?

EPA will analyze the results and determine if an environmental problem subject to EPA authority exists.

If the results show high nitrate levels that exceed drinking water standards, what will you do?

EPA will coordinate with state and local agencies to address any problem.

Have you communicated the reason for the trip with Central Sands Dairy, the largest farm in the area?

EPA coordinated the evaluation with state and local authorities but has not contacted any private entities except where access to private property was required to conduct the evaluation.

Please confirm the following facts that EPA personnel shared with Cristi Sullivan-Greening:

**41 bore holes for water sampling - at a shallow depth and deeper depth 60 to 80 feet.**

Samples were taken from depths of 45-49 feet and 30-34 feet.

**The testing will take place from roughly 20th Ave. and 4th street to the Wisconsin River.**

Testing took place West of Lake Pentewell from the Wood County Line to the North and South to 8<sup>th</sup> Street.

**(In an email, the DNR said a short while ago said that the EPA would be conducting groundwater sampling around Central Sands Dairy's land application fields and production area in Juneau County from April 30-May 4.)**

Thanks,

Allison Lippert

Hi Allison

That is not going to be enough.

**What prompted the agency to conduct the tests?**

**Was the EPA responding to complaints about high nitrate levels in the water, including a report of one mother who said that she was forced to terminate a pregnancy because of a severe birth defect?**

**When do you expect to have results - and what is the next step of the agency after getting the results?**

**If the results show high nitrate levels that exceed drinking water standards, what will you do?**

**Have you communicated the reason for the trip with Central Sands Dairy, the largest farm in the area?**

**Please confirm the following facts that EPA personnel shared with Cristi Sullivan-Greening:**

41 bore holes for water sampling - at a shallow depth and deeper depth 60 to 80 feet.

The testing will take place from roughly 20th Ave. and 4th street to the Wisconsin River.

(In an email, the DNR said a short while ago said that the EPA would be conducting groundwater sampling around Central Sands Dairy's land application fields and production area in Juneau County from April 30-May 4.)

Thank you,

Lee

*Hi Lee – please attribute to EPA or an agency spokesperson:*

EPA staff are conducting groundwater monitoring for nitrates and other contaminants in the Central Sands area.

Thanks,

Allison Lippert

Hi Allison, I am looking for information on EPA's visit to a CAFO on Juneau County on Monday to take ground water samples.

I was told that Cheryl Burdett was the contact, but I have not yet heard from her.

I'd like to know why you were there, what you were looking for and what prompted the visit?

Thanks

Lee
